| Cooperation with North America

isarp[®]patent has been operating in the USA and Canada ever since its establishment. Over the years, we have continued to expand and enhance our network of well-respected law firms overseas. Our clients benefit enormously from our successful and long-standing collaborations with these law firms.

The services we offer with respect to North America include support in all matters relating to patent, design, and trade mark protection as well as technical and legal translations from or into English. One of our specialities is our ability to draft patent applications in the US style, that is to say taking into account the formal requirements and legal conventions of the US patent system.

Our North America Department will be happy to answer any questions you may have. Please do not hesitate to contact us!
