

| Japan Department

Cooperation with Japan

The protection of IP rights not just in Germany but also beyond European borders is absolutely essential in today's globalised economy. Global markets not only offer good prospects for investors but also form the basis for a growing market in imitations and counterfeit goods.

isarpatent® has been active in Japan for decades and supports well-known Japanese companies, SMEs, start-ups and universities in enforcing their rights in Germany and Europe, often in close cooperation with Japanese partner patent law firms.

This enables us to guarantee high-quality support for trademark, design and patent rights. The services offered by the **isarpatent®** Japan department also include translations from and into Japanese.
